• Acquisition Builds on A10's Value in Making Customers More Agile by Bridging App Needs, Spanning Data Centres and Public, Private, and Hybrid Clouds

Reading – 26th July, 2016 – A10 Networks (https://www.a10networks.com/) (NYSE: ATEN), a technology leader in application networking and security, today announced that it has acquired Appcito, Inc., a provider of a versatile SaaS-based, multi-cloud ADC solution utilising microservice and container architectures. The acquisition positions A10 Networks as a comprehensive secure application services leader, and it represents a strategic step in the company's vision to help customers become more secure and agile as they bridge traditional and cloud application environments.

In 2015, Gartner named Appcito as one of the "Cool Vendors in Enterprise Networking." (https://www.gartner.com/doc/3021217/cool-vendors-enterprise-networking-) The acquisition adds to A10 Networks' existing momentum around providing secure application service solutions that meet several key demands. These demands include application analytics, visibility, and centralised control. Appcito fits seamlessly into A10 Networks' A10 Harmony solution (https://www.a10networks.com/meet-acos-harmony) architecture. The architecture, which was introduced in early 2015, supports secure application service offerings that span traditional data centres, private clouds, public clouds, and hybrid clouds.

New A10 Harmony-based cloud offerings that integrate Appcito technology will be available beginning in 2016. Solutions will include a cloud services controller for centralised application policy management and orchestration, elastic application traffic management capabilities integrated with DevOps processes, deep per-application visibility and analytics, and support for microservice and container-based applications.

"This is a strategic acquisition for our customers," A10 Networks CEO, Lee Chen, said. "We are helping our customers become both 'cloud-ready' and 'cloud-native.' We are giving them cutting-edge capabilities to control secure application services delivery across their data centres and clouds, such as in the area of analytics and automation. We are very excited about how Appcito fits into our vision to become the most comprehensive secure application services company in the industry."

"Appcito was founded with a vision to deliver cloud-native application delivery services and help application teams become more nimble, while delivering application performance and security that their end users demand," said Kamal Anand, CEO and Co-founder of Appcito. "Becoming part of A10 Networks and their customer-focused innovation culture will bring added benefits to application teams. The acquisition makes solid sense for customers wanting to collectively manage traditional on-premise and cloud application needs."

-END-
