StorageOS to Demo Enterprise-Ready, Persistent Container Storage Software at IP Expo, London

Submitted by: Touchdown PR

Thursday, 29 September 2016

London, UK– IP Expo, London – Sept 29, 2016 – StorageOS (http://storageos.com/), a new on-demand storage startup, today announced it is exhibiting at this year's IP Expo, at Excel in London, from 5th to 6th October. At Booth H7, StorageOS will be demonstrating its persistent container storage solution which enables enterprise organisations to build enterprise-ready, scalable container based applications with persistent, highly available, durable storage. The software-based storage solution ensures secure storage in the cloud, on local VM's, and on-premises, supporting replication to AWS, Azure or GCE; and integrates with Docker Swarm, Mesos and Kubernetes.

Currently in beta with enterprise customers and developers, the StorageOS software allows stateful containers whilst delivering enterprise features such as highly available data which is encrypted in transit and in rest, implemented via a rules based engine. As StorageOS can run on bare metal, virtual machines, native container environment and in the cloud, customers can avoid cloud provider lock-in, rapidly implement scale-out production storage and facilitate secure cloud migration.

In addition, Founder and CTO, Alex Chircop will also be joining a panel which will be discussing The Future of Storage, on Wednesday 5th Oct 15:40 to 16:10 at the Storage and Data Management Theatre. Joining Tintri and IT Candor Limited, Alex will be discussing what changes need to be made in order for the storage market to keep pace with the ever changing landscape and continuous data growth.

About StorageOS

StorageOS enables developer and system admins to use commodity storage in existing server, shared storage or cloud-based storage platforms seamlessly. The company delivers a central management console for all your data, tags to allow you to set business rules around how data is stored and protected and encryption and de-duplication to make moving your data around secure and low cost. StorageOS will allow the customer to save eight to ten times on their storage costs and decrease business risk and time to market. StorageOS has been named by Network Computing as one of the top 25 Vendors to watch - read more here (http://www.networkcomputing.com/networking/whos-hot-infrastructure-25-vendors-watch/1294546055?_mc=sm_nwc_editor_ For more information visit www.storageos.com (http://storageos.com/).
