ThreatQ enables Sopra Steria to anticipate threats through a new SOC based on intelligence management

London, UK, 25th January 2017– ThreatQuotient™ (https://www.threatq.com/), a trusted threat intelligence platform innovator is pleased to announce its partnership with Sopra Steria, a European leader in digital transformation and well-known in the cybersecurity space.

Sopra Steria's rationale behind the partnership is to bring a global solution  with advanced services focused on intelligence and threat management to its customers so that they can move away from a reactive response to threat to a more  move a more predictive way of operating. Sopra Steria has equipped its SOC (Security Operations Centre) with the ThreatQ platform which will become the cornerstone of it security operations.

Organisations continue to be targets or victims of cyber threats. Attacks tripled in 2016 from one every two minutes to one every 40 seconds. Confronted with growing cybercrime and the reality of regulatory pressure, cybersecurity has become a requirement for organisations. To stay competitive, companies must speed up their digital transformation, while guaranteeing that their information assets are protected, in particular via an efficient security incidents detection system. This means the new generation of SOC must be : adaptive, cognitive and predictive.

Partnership for Threat Intelligence management
Sopra Steria has chosen ThreatQuotient™ (https://www.threatq.com/), for its real-time intelligence organisation and management strategy, which will be one of   the keys for running a successful SOC. The continuous growth and complexity of threats require fast action and, more importantly, a switch to a new era of anticipation by combining technological, economic and geopolitical information. This new approach will benefit external sources of threat intelligences and feeds and share anonymised information with customers.

Antonin Hily, MSSP Director at Sopra Steria comments on the announcement, "The ThreatQ platform is the driving force behind of our threat operations. Its Threat Library and workbench are key capabilities our SOC analysts and other security tools use to identify what adversaries are involved on a given detected attack. Our day to day SOC activities are heavily focused on enriching the Intelligence attached to our customer's adversaries to provide our customers with a full understanding of the risk mitigated by our service."

"A Threat Intelligence Platform helps C-Level executives to integrate Security Operations feedback into their risk analysis and strategic planning activities." comments Anthony Perridge, Regional Director for ThreatQuotient™. "Companies need more and more Intelligence driven services like the Threat Intelligence Platform. I strongly believe that classical Managed SOC offers will disappear in the near future and will be replaced by Intelligence Driven SOC offers focused on threat defence and fighting adversaries."

The new generation of SOC shall be adaptive, cognitive and predictive

Sopra Steria is recognised as a trusted provider for its managed SOC services, combining the best of technology and human intelligence to evolve its offer towards the orchestration of intelligence services in a "security intelligence" global approach.

Sopra Steria's SOC is provided as a scalable offer depending on the client's requirements.  This offer provides a new state-of-the-art capability, including all the value added services from Sopra Steria, including cognitive intelligence and obviously Threat intelligence based on the ThreatQuotient platform.

About ThreatQuotient

ThreatQuotient™ understands that the foundation of intelligence-driven security is people. The company's open and extensible threat intelligence platform, ThreatQ, provides defenders with the context, customization and collaboration needed to ensure that intelligence is accurate, relevant and timely to their business. Leading global companies are using ThreatQ as the cornerstone of their threat operations and management system, increasing security effectiveness and efficiency.
