- The first commercially proven service to detect and eliminate OTT hijack
- Elimination service deployed on three continents

Revector (<http://www.revector.com/>), the leading specialist in anti-fraud and revenue protection for mobile network operators, today announces a new service to enable fixed and mobile network operators to eliminate termination revenue losses caused by over-the-top (OTT) players.

Research

(<http://www.revector.com/index.php/sim-box-and-ott-bypass-biggest-threats-to-mobile-operator-revenues/>) by Revector identified that mobile network operators have lost on average 20% of termination revenues to OTT hijack in the past 12 months. Some operators have lost up to 70%. Revector's solution is the first OTT hijack service to be commercially proven, having been deployed on three continents. The service works on enterprise-grade platforms and servers and eliminates OTT hijack in a matter of days.

OTT hijack is the latest threat to telecommunications service providers' revenues. OTT services are offering wholesale termination minutes on the open market at low cost. Calls that start as a normal telephone call are hijacked and delivered within an app environment. Not only does this cost service providers termination revenues, it also acts as a marketing tool for the OTT services. OTT hijack can impact call quality and can deny users access to standard telephony services such as voicemail and call forwarding.

Andy Gent, founder and CEO of Revector, comments: "OTT hijack provides the most immediate threat to telecommunications service provider revenues today. It removes a significant proportion of the revenue operators are using to maintain faster networks and is therefore against the interests of OTT players as well – the effects are damaging for all.

"Revector has been working on the development of an OTT hijack elimination service for more than 12 months and the commercial deployment of this service across three continents demonstrates both the serious threat that OTT hijack poses to service providers and the commercial viability of the Revector solution.

"The Revector Solution is now providing operators with a real understanding where their International Traffic losses are occurring on OTT as well as providing protection against new threats as the OTT market develops."

ABOUT REVECTOR

Founded in 2001, Revector creates products and services that enable telecommunications companies to quickly and effectively counter fraud. Working with operators including Vodafone, Bharti Airtel, Hutchison Three, Zain, Digicel, Etisalat, Telenor, Tele2, Tigo, MTS, NTT DoCoMo, Rogers, T-Mobile and Cable & Wireless, Revector's products have enabled mobile network operators to remove millions of dollars' worth of fraudulent activity from their networks.

In 2013 Revector was one of only four UK companies to be awarded two Queens Award for Enterprise – in Innovation and International Trade, the highest official UK awards for British businesses. The company was also identified as one of the 30 most innovative UK mobile companies by Real Business.
