

TEAM ENERGY AWARDED PLACE ON G-CLOUD 12 FRAMEWORK

Submitted by: Team Energy

Tuesday, 6 October 2020

Energy and sustainability consultancy specialist, TEAM Energy, has successfully been listed on the Crown Commercial Services (CCS) G-Cloud 12 Framework, to offer its cloud-based services to the public sector.

Organisations looking to adopt digital solutions that enable their energy and sustainability ambitions, can use G-Cloud 12 to access TEAM's suite of services including their innovative Sigma energy management and tenant billing solutions. To support their successful deployment, the company is offering service design, data migration, project management, software testing and staff training on the Framework.

TEAM's appointment to G-Cloud 12 is one of several recent achievements. Last month they celebrated 35 years of business, and became one of the first organisations to appoint registered Energy Conscious Consultants through the Energy Services and Technology Association (ESTA) EnCO Training Programme. As part of the ongoing expansion of their Consultancy offering, the company has also recently launched a number of new energy services, including their Energy Behaviour Change Programmes and MOP efficiency contract service.

Commenting on the good news, Pete Morrell, Sales Manager for TEAM said:

"We're delighted to achieve accreditation for the latest iteration of G-Cloud. This framework gives public sector organisations a more effective and cost-efficient route to adopting technology to support their energy and carbon management.

At a time when the public sector can really benefit from digitising their existing energy management to streamline their processes and create cost and resource savings, this Framework is vitally important.

"

Public sector organisations wanting to deploy Sigma energy management solutions will benefit from TEAM's first-class implementation, support and advanced training programmes.

G-Cloud 12 is the latest iteration of the Government procurement framework that provides public sector customers with an alternative route to procuring digital services, helping them avoid traditional procurement processes that can often be lengthy and constrain buying decisions. Hosted via the Digital Marketplace (<https://www.digitalmarketplace.service.gov.uk/g-cloud/services/885135857805274>), each iteration of the framework offers organisations innovative technology solutions to meet their unique industry challenges.
