Investment to Support High Learning Impact Programmes Around the World

Whizz Education, the leader in adaptive learning technology and maths educational programs, has announced it has secured a new round of growth investment funding. The investment will be used for product development and expansion to benefit every student and school Whizz Education works with around the world, particularly being directed to support high learning impact programmes to recover learning.

Richard Marett, CEO, Whizz Education, confirms: “As an education partner dedicated to improving learning outcomes in maths in a viable, sustainable way, we are delighted to have secured significant additional funding from existing shareholders plus three new investors for the benefit of our students worldwide.”

Whizz Education proactively seeks out and has been involved in many projects in low-income settings to promote learning opportunities globally with the aim of enabling all children to gain access to the best education. Whizz Education has run large programs in many countries, including in Kenya, Thailand, the Democratic Republic of Congo, the rural States of Mexico and many western countries. Whizz Education’s work spans six continents, reaching 1.5 million students and thousands of teachers, and is 100% focused on improving quality education. The team’s expertise enables schools and students, including those in low resource complex settings, to achieve accelerated learning in maths.

Richard Marett continues: “We believe every child deserves a learning experience that caters to their individual needs and pace of learning, and we will now invest our support with the aim of rolling out high learning impact programmes on a national scale to help those countries in most need.

“We will also be investing in a new training experience to help teachers support every child, and new reporting tools linked to a global metric which is also relevant in local contexts.

“Our continued focus on ongoing enhancements results in increased rates of progress across all territories, meaning learning gains are not only sustainable but can also be improved over time as students continue to use the programme even in low resource settings.”

About Whizz Education

Whizz Education is an education partner accountable for learning outcomes in maths. Since 2004, we have partnered with schools, ministries of education and development agencies to bring the power of

individualized learning to over a million students worldwide through our award-winning AI software and programs. Our team has pioneered the use of adaptive learning technology to raise standards in maths. The result is that we have developed a quality, award-winning, live tutoring experience that results in measurable gains.

Suitable for children aged 5-13 years, our virtual tutor Maths-Whizz if used for an average of 60 minutes per week, can improve "Maths Age" by more than 18 months in the first year of use.

Our experienced educators work in partnership with school leadership to develop and implement a plan aligned with their defined objectives. We train teachers how to navigate our virtual tutoring service, its accompanying data and library and instructional resources to deliver a more engaging and creative approach to maths. The result is reinforced curriculum delivery and assessment, a quickened pace of learning outcomes and reduced workload for teachers.
