

Case Study – Company EV price comparison – 3 years ago vs. now amid rising electricity costs

Submitted by: Key Loans & Mortgages Limited t/a KIS Finance

Wednesday, 28 September 2022

Finance broker KIS Finance (<https://www.kisbridgingloans.co.uk/>) purchased their first all-electric company car, the Jaguar I-Pace three years ago. Today, having covered just over 40,000 miles, KIS want to share their experience of owning an electric vehicle and how the running costs over the past 3 years have compared to similar model petrol and diesel powered cars.

The case study covers:

- The experience of charging the vehicle when it was first purchased compared to now
- How today's electricity price concerns have overtaken 'range anxiety' in people's hesitancy over switching to electric
- How electricity price rises have affected the running costs of electric vehicles
- Comparisons between electric, petrol, and diesel in terms of price rises and running costs
- Service station electric chargers price comparison
- What rising electricity costs mean for the future of electric vehicles

For the full case study, please go to:

<https://www.kisbridgingloans.co.uk/finance-news/evs-range-anxiety-replaced-by-electric-price-concerns/>
