Thursday, 6 October 2022

Company Recognized for Excellence in Helping Enterprises Establish Digital Trust for Human and Machine Identities at Scale.

ROSELAND, NJ — October 06, 2022 — Sectigo® (<https://sectigo.com/>), a global leader in digital certificates and automated Certificate Lifecycle Management (CLM), today announced it was named Overall Encryption Solution Provider of the Year in the 2022 CyberSecurity Breakthrough Awards. The awards, hosted by leading market intelligence firm Tech Breakthrough, highlight the world's best information security companies, products, and people.

A panel of senior-level, experienced cybersecurity professionals, including journalists, analysts, and technology executives, selected Sectigo from more than 4,100 nominations worldwide.

"It's an honor to win a CyberSecurity Breakthrough Award for the second year in a row for our innovative approach to enabling encryption. From authenticating machine-to-machine interactions to confirming the digital identity of employees accessing business networks and services, managed certificates are part of every secure interaction in today's digital enterprises," said Jason Soroko, Head of Product, Sectigo. "The challenge for enterprise IT leaders lies in managing and governing the lifecycles of every single digital certificate deployed. Sectigo's identity-first security solution provides enterprises with an automated way to secure and govern digital identities at scale."

Sectigo is a trusted security and encryption partner for some of the world's largest organizations. With over 20 years of experience establishing digital trust, Sectigo is one of the longest-standing and largest Certificate Authorities (CAs) with more than 700,000 customers, and its team has issued and enabled enterprises to manage over a billion digital certificates deployed across the globe.

The company's recent market-disrupting move to become an identity-first security CLM solution allows enterprises to manage the lifecycles of certificates issued by Sectigo and other CAs within its flagship cloud-based product Sectigo Certificate Manager (SCM) (<https://sectigo.com/enterprise-solutions/certificate-manager>). With this announcement, Sectigo is focused on providing the interoperability and openness CISOs and their teams need to reduce complexity, consolidate, and to drive further automation with critical cybersecurity functionality.

Sectigo SCM provides customers with complete visibility and full digital certificate lifecycle control, enabling the rapid deployment, revocation, and replacement of any public or private public key infrastructure (PKI) certificate, all from a single "pane of glass" platform. It also automates tasks, enforces compliance and control, minimizes person-hours, scales up to manage billions of certificates, and offers integrations with leading technology providers and advanced automation capabilities to fit in every IT environment.

Sectigo's position as a CA, a CLM solution provider, and a web security provider means that enterprises that invest in Sectigo's identity management suite have access to an ecosystem that can handle all

their PKI-related needs. Unlike other providers in the space, Sectigo's capabilities cover the process from issuance to management and beyond, which allows SCM to facilitate both legacy and emerging use cases with ease.

Sectigo previously won this award in 2021
