Joint proposition combines NLP and ML with knowledge graphs to intelligently augment enterprise decision-making and get greater value from data

Zürich, November 22nd, 2022. Squirro (<http://www.squirro.com/>), the Augmented Intelligence solutions provider, has announced a strategic global partnership with knowledge graph provider the Semantic Web Company (<https://www.poolparty.biz/>), creating a ground-breaking new Composite AI proposition.

The new Composite AI solution is the only one delivering Machine Learning (ML), Natural Language Processing (NLP) and knowledge graph technology to enterprises today. It marries content from any source with a user's intent and context to intelligently augment decision-making. It provides personalized results tailored to a specific individual, delivered precisely when that user requires it.

"Combining Squirro's Insight Engine with the Semantic Web Company's knowledge graph technology is a game changer," said Dr. Dorian Selz, CEO, Squirro. "Staid, static, unused information is turned into a decisive input factor for better and more intelligent business decision making."

ML creates and identifies signals but cannot take into account the representation of knowledge and reasoning behind it. The full picture – expanded queries and results - gives a greater understanding. The Semantic Web Company and Squirro partnership expands the scope and quality of AI applications by delivering that deeper understanding.

Squirro's Insight Engine provides NLP and ML to classify the content on a sentence level according to the user's intent. It provides a user-friendly interface and learns from the interaction what the user is looking for and the context of their search.

This is aligned with the Semantic Web Company's knowledge graph technology - known as PoolParty - which connects people and intent with data. This enriches content with domain knowledge and serves as a context engine at scale. It contextualizes concepts from the content and links them to other meaningful concepts and contents to extend the search results.

"The Semantic Web Company is committed to making its PoolParty platform available to other highly motivated and ambitious companies," said Andreas Blumauer, CEO and co-founder, the Semantic Web Company. "The partnership with Squirro represents a significant step forward and now makes it possible to offer first-class composite AI solutions."

A Composite AI platform generates insights from any content and data by fusing different AI technologies, such as ML and semantic AI, with graph technologies. Typically, Composite AI provides faster and more accurate results, and a reduced time to value, a significant advance on what is achievable without Composite AI.

"Machine Learning is a powerful AI technology, but because it is purely statistical, it lacks the full

context of a user's intent," continued Dr. Dorian Selz, CEO, Squirro. "Adding knowledge graphs, which are much more symbolic, means a user can explicitly model the domain knowledge in that field. Our joint proposition also means that users can work with pre-built industry-standard knowledge graphs, adapting them and developing their own models for their specific industry. Composite AI is a major advance in the evolution of AI, and our partnership with the Semantic Web Company puts us right at the front of that evolution."

About Squirro

Squirro is a leading provider of Augmented Intelligence solutions for search, analysis, and interpretation of unstructured information, which was recognized as a "Visionary" in the Gartner Magic Quadrant for Insight Engines. Squirro is an ISO 27001 certified company.

Thanks to its unique technology, marrying AI, Machine Learning, and Predictive Analytics, Squirro's solutions deliver measurable results for its customers in the form of revenue and efficiency gains, reduced risks and cost, as well as faster time to market.

Founded in 2012, Squirro is a fast-growing company with dedicated teams in Singapore, the United States, Great Britain, and Switzerland. Some of its customers are European Central Bank, Bank of England, Standard Chartered, Candriam, and Henkel.

Further information can be found at <https://squirro.com> or contact@squirro.com

About The Semantic Web Company

The Semantic Web Company is the vendor of flagship product PoolParty Semantic Suite, the most complete and advanced semantic middleware platform on the global market. For several years in succession, the company has been featured in Gartner publications as a "Sample Vendor" in the Gartner Hype Cycles and a "Visionary" in the Magic Quadrant for Metadata Solutions.

Additionally, SWC is proud to be continuously named a "Company that matters in knowledge management" and a "Trailblazer" for semantic AI in KMWorld's annual reports. With a customer base of Global 2000 companies, Semantic Web Company is dedicated to helping customers roll out their knowledge management and AI strategies within their organizations. Semantic Web Company is headquartered in Vienna, Austria with branches in the UK, Germany, and USA. Check out the PoolParty website at: www.poolparty.biz
