

ComponentOne Release True DBList Pro 7.0 and True DBSuite 6.7

Submitted by: Developer Solutions

Tuesday, 15 May 2001

14 May 2001 (DS0116) - Developer Solutions International, the specialist in application development solutions, announces the release of True DBList Pro 7.0 from ComponentOne, the latest version of the customisable data-aware ActiveX list and combo controls for Visual Studio that allows developers to quickly and easily retrieve and display data. A free, fully featured evaluation version of True DBList Pro 7.0 is available to download from www.developer-solutions.co.uk. RRP £195 + VAT from Developer Solutions or its authorised resellers. Current users of version 6.0 or version 6.0 of True DBGrid Pro can upgrade for RRP £155.00 + VAT. Visit www.developer-solutions.co.uk for full details.

"Version 7.0 of True DBListPro has an enhanced searching facility allowing developers to easily create custom data search engines to handle large databases using the Find method. It also has a number of Scrollbar enhancements allowing developers to update the controls' display with new data when the scrollbar thumb is moved, and choose whether the controls display a pop-up text window when the scrollbar thumb is dragged. Both of these enhancements, coupled with the other new features found in Version 7.0 make True DBList Pro 7.0 a valuable upgrade." says Adrian Handley, general manager, Developer Solutions International.

New features:

- User interface enhancements: customise the row divider and sub-row divider colours of the controls and change the appearance and colour of cell borders, also customise the height of the edit portion of the combo box and set the number of items in the dropdown portion of the combo box
- Data model enhancements: add array-like data to the TDBList or TDBCombo controls without using the XArrayDB object
- Automatic Column Sizing - keep data readily available with the "spring mode" option that resizes columns proportionately when the list is resized horizontally
- AddItem Mode - easily populate the control using AddItem, RemoveItem and Clear methods
- 3D Display - use the standard control appearance or easily switch to three-dimensional display of the list's border, caption bars, column headings and column footers
- Right-to-Left Functionality - accommodate Arabic or Latin languages
- Checkbox Selection - make multiple selections simply by clicking the checkbox attached to each row
- Add-in Migration Utility - automatically convert your existing Visual Basic projects from the previous version to ComponentOne True DBList Pro 7.0.

A new version of True DBSuite is now available to encompass the new version of True DBList. True DBSuite 6.7 includes True DBList Pro 7.0, True DBGrid Pro 7.0 and True DBInput Pro 6.0. RRP £649.00 + VAT from Developer Solutions or its authorised resellers. Upgrade from version 6.0/6.5 RRP £385.00 + VAT, upgrade from version 5.0 RRP £616.00 + VAT, upgrade from Visual Studio RRP £499.00 + VAT.
