

## Alvarion/Elan Combination makes WLAN a breeze

Submitted by: Elan Digital Systems

Friday, 15 March 2002

---

Alvarion UK, producers of the BreezeNET Wireless LAN cards, have settled on Elan PC Card adapters as their recommended desktop PCMCIA solution for all their customers and distributors. The Elan P-Series adapters, which come in single or dual slot versions are able to accept all three of the most popular BreezeNET cards, the BreezeNET PRO.11, the BreezeNET DS.11 and also the new BreezeNET DS.11b. The Elan P111 and P222 desktop adapters impressed Alvarion UK with their excellent reliability, as well as the parallels in easy plug-n-play capability on both card and adapter - meaning that setting up a Wireless LAN Network has now never been easier.

The Alvarion cards offer powerful, fast and robust wireless network infrastructures. The PRO.11 card is suitable for indoor/outdoor with Frequency Hopping Spread Spectrum technology, and the DS11 and DS11b are indoor WLAN cards which ensure uncompromising security to prevent network intrusion and data loss by using encryption. Hugh Garrod, UK & Ireland Sales Manager of Alvarion UK says " With the increasing market predictions for WLAN we are pleased to be able to widen our range of Wireless Network solutions to include not only laptop, but desktop users as well. Additionally, the interoperability of both the Elan adapter and the BreezeNET cards further enhances congruence."

The P111 and P222 adapters are part of Elan's range of Desktop PCMCIA products. "We are delighted that the combination of the Elan and the BreezeNET cards provide a perfect solution for the desktop user," comments Julian Barnard, Elan's Managing Director, "and gives BreezeNET distributors the confidence that they can keep customers happy with the assurance of trouble-free adapter installation and solid reliability."

For desktop users who wish to install a Wireless LAN network the Alvarion/Elan combination is another significant step forward in Wireless Network development.
