

Utimaco Safeware Announces Availability Of Safeguard Transaction Server,

Submitted by: Strategic Public Relations Ltd

Friday, 26 April 2002

On-Line Transaction Verification Has Never Been This Easy & Efficient

The Digital Transaction Security Business Unit of Utimaco Safeware today announced the availability of SafeGuard Transaction Server, a security plug-in for verifying electronic transactions with easy integration into most Web and Application servers. SafeGuard Transaction Server offers signature verification and certificate validation supporting both Certificate Revocation List (CRL) and Online Certificate Status Protocol (OCSP). Successful verification yields reliable proof of origin, transaction integrity and transaction non-repudiation. Thereafter application servers can process these transactions securely.

Organisations can build reliable electronic transaction or e-business portals using SafeGuard Transaction Server and SafeGuard Transaction Client. With SafeGuard Transaction Server, Utimaco Safeware relieves organisations from having to create their own security module from scratch, by providing easy-to-install transaction security plug-ins for popular web servers. In comparison SafeGuard Transaction Client allows customers or business partners to perform digital transactions with familiar browsers, such as Microsoft Internet Explorer, Netscape Communicator and Opera. SafeGuard Transaction Client offers organisations freedom in selecting smart card and smart card readers.
