<http://www.iarna.co.uk>

IARNA the web-hosting company today announces that, following its successful merger with the global Hostway corporation, it is re-launching its website along with a range of new services. These include SiteControl 3.0, a web-based management tool and for the first time, a comprehensive suite of Linux based web-hosting services. To date the company's services have been Windows or Unix based but it has recently configured its servers to run the Linux operating system - Red Hat 7.2.

SiteControl 3.0

SiteControl 3.0 is the UK's most advanced web-hosting control tool and will give customers advanced usability functions including an improved interface, delivering enhanced navigation across the SiteControl 3.0 application. The tool has been re-designed for optimum scalability, speed and stability.

Many more simultaneous users can be supported and manage their websites at any time and from anywhere that they have access to the web. The improvements to the management tool will include:

- Centralised email and enhanced domain name management through one user interface
- Real time updates to accounts and features in just a few clicks
- A new usage monitor that allows users to check disc, traffic and other usage data in real time
- StoreBuilder, a tool that enables users to create a fully working ecommerce store and manage inventory from a simple Interface
- DNS/MX record manager, which allows users to modify critical domain name information automatically without recourse to the numbered Internet Protocol

Linux packages

IARNA has configured its servers to run Red Hat Linux version 7.2 to take account of the growing popularity of the open-source platform with existing customers. It is offering a new comprehensive suite of Linux packages to include new features such as improved reliability and enhanced email management. Mission critical information is supported by MySQL databases and PHP version 4, so that fully interactive web pages can be created and structured, giving end-users a richer website experience.

Robert Lovell, CEO at IARNA said: "IARNA is committed to continually adding and updating its product set. Our aim is to offer technologies to our customers that are both cutting edge and affordable. By investing heavily in research and development and launching SiteControl 3.0 and an entire set of Linux hosting packages we believe that we are delivering on these core objectives."

About IARNA

IARNA, part of the Hostway Corporation, was founded in 1999 as a business-hosting specialist, providing technology led web hosting, dedicated server management and co-location to a wide range of clients. The company has offices in London and operates a docklands data centre with the Easynet Group plc. The company services some 15,000 clients, including Motorola, Lucent Technologies, Toshiba, Haymarket and Radio Taxis.
