* Intec's Best of Breed Real-Time Convergent Mediation Product, Inter-mediatiE, is Selected for Prestigious TeleStrategies Award

London – June 19, 2002 – Intec Telecom Systems, a leading worldwide operations support systems (OSS) vendor for fixed, mobile, and IP/next-generation networks has received the prestigious TeleStrategies 2002 Mediation Excellence Award at a ceremony held at Billing World 2002. Intec competed against all major industry vendors of mediation systems for this award, including Xacct, Narus and Ace-Comm. Intec particularly highlighted the convergent capabilities of the product, and its diverse, global user base of over 100 fixed, wireless, IP and 3G customers, in its award submission.

“This award endorses Inter-mediatiE as the world's outstanding convergent mediation system,” says CEO Kevin Adams. “We have successfully combined the ability to handle the traffic levels of the world's largest carriers with a truly convergent capability that can handle any kind of traffic, from voice to complex next-generation services, in a single system.”

There are over 115 customers of Inter-mediatiE using the product today. In the wireline market customers include Verizon, BellSouth, Cable & Wireless, Telia, Telstra, and Optus; in the mobility market, US Cellular, BellSouth (SA and ME), Cable & Wireless and Vodafone; and in the next-generation network environment clients include Hutchison 3G, ITXC, C-beyond, and Hansenet.

Intec recently announced Version 4 of Inter-mediatiE, which brings substantial new functionality targeted on the high-volume, complex service requirements of next-generation networks and wireless operators, including new Content and Roaming Managers. Inter-mediatiE's flexible, distributed architecture, real-time capabilities and user configurability allow Intec's customers to adapt mediation requirements to their changing business plans with ease, reducing the cost of bringing new services to market.

Intec Telecom Systems

Intec Telecom Systems is a leading worldwide operations support systems (OSS) vendor for fixed, mobile and IP/next generation networks, with a product portfolio that includes convergent mediation, intercarrier billing, activation, and fraud management software. With more than 250 customers worldwide, many of the world's largest telecom operators including BellSouth, Verizon, Cable & Wireless, France Telecom, Telstra and Vodafone – rely on Intec solutions for critical components of their revenue generation chain.
