

Download BEAP 1.3 and find your wings with a stunt plane flight!

Submitted by: Extend Technologies

Monday, 9 June 2003

09/06/03, UK: To celebrate the launch of the latest version of its mail and network management solution, Extend Technologies is offering everyone who evaluates BEAP 1.3 the opportunity to win one of two flights in a Pitts Special stunt plane.

Potential test pilots can download a free 30-day evaluation copy of BEAP 1.3 from www.beapbeap.com/imahero, where they will automatically be entered into the prize draw.

BEAP has been developed by Extend Technologies to allow organisations, and specifically helpdesk staff, to administer mission critical services such as the email messaging system. BEAP components are available to monitor all major messaging applications, including email servers, firewalls and content security solutions.

With the launch of BEAP 1.3, Extend Technologies has taken BEAP beyond the messaging system. Two new components, the BEAP Custom Adapter and the BEAP Poller now allow administrators to monitor a wide variety of applications and network connections – including domain controllers, ISP connections and in-house software deployments. For full information on the BEAP solution, visit www.beapbeap.com/products.

The stunt plane competition closes on 31/07/03 and the winners will be notified by telephone on 04/08/03. For full terms and conditions, please visit www.beapbeap.com/imahero.
