Organisations can double email management effectiveness from just £99 per month

07/08/03, UK: Extend Technologies, developer of the BEAP range of service management tools has today launched a rental scheme for its MAILsweeper remote management adapter. The new offer allows organisations to enjoy the benefits of BEAP's web-enabled, multi-user management interface for MAILsweeper without any upfront software costs.

Extend Technologies managing director, Chris Heslop, commented: "In the current economic climate, IT departments are being driven to find new levels of efficiencies – but many cannot get sign-off for the software purchases intended for that very purpose. By offering organisations the option to rent the BEAP MAILsweeper adapter, we've removed any upfront cost pain and brought the quarterly rental figure down to a point where it pays for itself immediately."

The BEAP for MAILsweeper adapter allows mail administrators to devolve the management of message areas to multiple IT resources, anywhere in the organisation. Authorised users simply access the quarantined emails through a standard web browser – which, unlike the MMC, supports multiple concurrent users. The BEAP MAILsweeper adapter has already won great respect from existing users. In a recent survey, all the BEAP administrators questioned cited the fact that they had shared the management of message areas as a key benefit of BEAP.

According to the survey results, 80 per cent of users said that BEAP has saved them money in email managements, with 60 per cent reporting that they can release quarantined messages more than twice as fast through BEAP compared to MAILsweeper's MMC. All BEAP administrators stated that they now have more time to spend on non-MAILsweeper duties and that they would happily recommend BEAP to other MAILsweeper users.

The cost of renting BEAP for MAILsweeper starts at just £99 per month (invoiced quarterly) and the scheme is open to customers worldwide. For more information, and an online quote, visit www.beapbeap.com/ads/rental.asp.
