

LambdaNet extends London Metro network to TeleCity

Submitted by: Brands2Life

Tuesday, 12 August 2003

London, 12 August, 2003 - TeleCity (LSE: TCY.L), the award-winning pan-European data centre services company, today announced that LambdaNet Communications, the pan-European supplier of telecommunications and Internet services, has extended its Metropolitan Area Network (MAN) into TeleCity's two London Docklands facilities.

LambdaNet's decision to extend its London MAN to TeleCity's data centres was twofold; a significant number of existing customers, including carriers and service providers, were looking to route traffic through London on the LambdaNet network. Additionally, by establishing a presence at TeleCity London, LambdaNet can interconnect with a high number of businesses located at the same facility, increasing the scalability of its service while reducing the costs of linking to these networks and partners across multiple locations.

London is a key location in LambdaNet Communications' international IP and optical network, which spans more than 70 cities Europe-wide. By extending its network capacity across London, LambdaNet will extend its extensive portfolio of telecommunications services - ranging from bandwidth, wavelength and Internet transit services through to VPNs (Virtual Private Networks) - to Telecity's wholesale customers looking to satisfy the increased demand for metro services in the region.

Bernie Smedley, CEO at LNG Holdings S.A., said: "We were looking for a state-of-the-art data centre in London from a provider who had a commitment to high levels of customer service and a footprint across Europe. TeleCity's proven reputation and experience of working with other international carriers and its valuable mix of bandwidth intensive customers make their business environment extremely attractive.

"We are very pleased to be offering services to TeleCity customers. The metro network extension to TeleCity is an extension of our plan to link all the most important data centres in Europe through the LambdaNet IP transport network."

"We're very happy to add LambdaNet to our formidable choice of network providers in London," said Simon Bushell, TeleCity UK country manager.

"Large carriers such as LambdaNet have found the TeleCity data centre environment ideal for establishing relationships with customers and partners alike. We are committed to bringing the best of breed network services and carrier choice to TeleCity customers."

About LNG Holdings SA

LNG Holdings SA has its headquarters in Luxembourg. The company - including its LambdaNet Group - employs approximately 220 people in Europe, with the majority of employees in Germany, France and Spain.

About LambdaNet Communications

Connecting more than 50 European data centres and more than 70 cities in 13 countries, LambdaNet's 16,000-kilometer fibre and IP network is one of the most powerful and closely woven networks in Europe, servicing approx. 300 customers. Its European customer base is stable, serving a broad range of telecommunications operators (telcos, voice/access, mobile, ISP, ASP and CATV) including Vodafone D2, Cable & Wireless and Telia within Europe and into the East Coast of the USA.

Additionally, LambdaNet operates Metropolitan Area Networks (MANs) in fifteen European centres of business - London, Amsterdam, Brussels, Paris, Marseille, Bordeaux, Strasburg, Lyon, Madrid, Vienna, Copenhagen, Frankfurt, Düsseldorf, Munich and Hamburg. LambdaNet Group offers traditional transport services (wavelength, bandwidth and collocation services) and delivers higher value services that include advanced IP transport (IP Transit, Virtual Private Networks).

About TeleCity

TeleCity is a leading European provider of colocation and data centre services. Through its network of carrier-neutral data centres, it provides colocation, IT infrastructure management and IT services to communication service providers, corporate enterprises and the public sector. In February 2003, TeleCity was awarded 'Best Colocation Provider' by the UK Internet Service Providers Association for its outstanding data centre facilities, and high levels of customer service. The company has 9 locations across Europe, in Amsterdam, Dublin, London, Manchester, Frankfurt, Paris and Stockholm. Headquartered in London, TeleCity was established in 1998, floated on the London Stock Exchange (TCY.L) in June 2000 and posted a turnover of £23.8M in the year to December 2002.
