---

C2C Systems announces the release of Archive One Compliance, an archiving, retention and retrieval management application for Microsoft Exchange.

Archive One Compliance is designed to provide a full discovery and audit trail to organizations that need to comply with the vast array of country, government, industry and corporate rules and regulations for e-mail retention and retrieval. With low Total Cost of Ownership a prime objective, the product integrates with market leading storage management software, so seamlessly introducing long-term email storage into the data lifecycle strategy, at a lower adoption cost for the organization. The first release of Archive One Compliance integrates with HP OpenView Data Protector, #2 in the Enterprise Back-up product market by installed base in 2002 according to Gartner\*.

Darren Gale, HP's Manager for OpenView Data Protector says, "Incorporating email into the information lifecycle management strategy is increasingly important to our customers across all types of business. We're pleased that Archive One Compliance works in conjunction with Data Protector to provide the specific capabilities that long-term email retention requires."

"C2C is delighted to be working with industry leaders like HP to bring an affordable and easily integrated solution to organizations that are required to archive and retrieve email," says Dave Hunt, CEO of C2C Systems. "Archive One Compliance will help organizations that rely on Microsoft Exchange meet the requirements of a full spectrum of regulations, including SEC, NASD, ISO, DOD, HIPAA, and the Data Protection Act."

Archive One Compliance features include:

- Integration with leading storage management software, including HP OpenView Data Protector.
- Widest range of storage hardware devices supported.
- Ease of use and installation; all search and retrieval results available from Outlook.
- Securely indexed giving fast sampling and retrieval.
- Full audit trails for regulatory compliance, including audit of searches.
- Scalable architecture from tens to thousands of users.

-Archive in standard compressed format to optimize storage use.

Archive One Compliance is part of the Archive One family, which helps reduce risk associated with email while better managing resources for improved productivity. The Archive One family also includes Archive One Capacity, a single technology capacity management solution to improve Exchange performance and Archive One Policy, for enforcing long-term email retention and retrieval (available early 2004).

Archive One Compliance is available now. For more information, please go to [www.c2c.com](http://www.c2c.com)
