Fresh EggNT strengthens its security portfolio with a leading SSL VPN product

Rainbow Technologies, a worldwide provider of information security solutions, and Fresh Egg Network Technologies, UK Master Distributor of Internet Security Solutions, have agreed Distribution rights for Rainbow's SSL VPN solution, NetSwift iGate.

Graham Fox, managing director of Fresh EggNT said "Our decision to work with Rainbow Technologies was based upon a combination of the demand for clientless VPN and its ability to be sold as part of a managed service. When we looked at the solutions available, NetSwift iGate offered a number of unique features which, combined with Rainbow's credibility in security, made it a simple decision."

NetSwift iGate provides hardware-based SSL encryption for all applications and data; granular web access control to the file level, central administration of users by group, role and application, integrated two-factor token authentication or password access, auto log-off of users when using the iKey tokens and an application proxy that significantly reduces web server exploitation risks.

"We're very impressed with Fresh EggNT's innovative approach to the reseller market," said Gary Clark, vice president of sales and marketing, EMEA, Rainbow Technologies. "We are confident that this approach will ensure NetSwift iGate becomes the standard SSL VPN."

The NetSwift iGate is now available to Fresh EggNT's channel partners and evaluation units are also available from Fresh EggNT on request.
