Monday, 15 March 2004

IRVINE, Ayrshire, Scotland – 15th March 2004 – Ayrsoft, provider of simple and affordable business solutions, today announced the immediate availability of secureDX. secureDX is a data exchange service that enables users to transfer files to anyone, completely securely over the Internet in a manner more effective than regular, or even encrypted, email. It is ideal for the financial, legal, and medical industries or any situation where sensitive information needs to be transferred and protected.

“Using our innovative web-based technology, we have reduced the cost and complexity of transferring data securely while maintaining the integrity of the data,” said Graeme Millar, CEO of Ayrsoft. “secureDX is a robust, yet affordable solution for companies of all sizes.”

secureDX works by encrypting each electronic file during its initial transmission over the Internet. Once the file is uploaded to the secureDX server, it is encrypted again and chopped into small packets of data that are randomly distributed over several parts of the secure server. The encrypted packets are later reconstituted when the authorized recipient is ready to retrieve the data.

Subscribers to the secureDX service pay a monthly fee, based upon usage, in order to upload their sensitive files to the secureDX server. Recipients are notified when there is a file for them, and they may pick it up from the secureDX server free of charge, with just a simple registration. The sender receives an email confirmation when the receiver has collected the data.

secureDX is simple to use and can be accessed from any PC, anywhere in the world. There is no software to install for users. And best of all, it eliminates the need for costly courier and delivery services.

Subscription fees begin at £10 per month. Larger companies with extensive transferring needs can also purchase and host their own secureDX server. Interested parties should contact Ayrsoft directly to discuss their needs.

About Ayrsoft

Founded in 2001, Ayrsoft develops simple and affordable business solutions for small and medium sized organizations. Clients include IBM, European Medical Evaluation Agency, and Athlone Institute of Technology.

Ayrsoft's product lines include secureDX, web-based secure data exchange, icon Server, an all-in-one small business server, and hubworX, a family of network appliances.
