---

Reading, UK — March 16, 2004 — C2C Systems and Lextek International have partnered to provide fast and efficient e-mail archiving products to companies worldwide. C2C has incorporated Lextek's Onix search technology into its Archive One product line.

Here's how the technology works. Archive One Compliance, an archiving, retention and retrieval management application for Microsoft Exchange, stores and manages large amounts of e-mail text. If you're a financial institution retaining electronic documents for six years to comply with SEC Rule 17a-4, you need an infallible way to archive, manage and retrieve e-mails (sometimes upon request). Lextek's Onix full text indexing and retrieval technology — also licensed by Adobe Systems, Inc. — provides the flexibility and speed to do so in a timely manner with minimal effort.

"Onix's superior indexing speed, index compression and storage technologies allow a query to be processed and results returned to users quickly — even for extremely large collections of text," says Art Pollard, president of Lextek International. "It would be no problem for a large organization to search through six years of e-mail and find exactly what they were looking for in a short period of time."

"Indexing, fast search and retrieval are critical to e-mail archiving to enforce policy and meet regulations," says Dave Hunt, CEO of C2C. "We are pleased to partner with Lextek International to offer the latest research in text indexing technology to our customers."

ABOUT C2C
C2C (www.c2c.com) provides a range of e-mail lifecycle management software for Microsoft Exchange. C2C's solutions for e-mail archiving, mailbox size management, search and discovery are used by three million users at more than 2,000 organizations worldwide. C2C, a Microsoft Gold Certified Partner, is headquartered in Reading, United Kingdom, with U.S. offices in Springfield, Mass.

ABOUT LEXTEK INTERNATIONAL
Lextek International (http://www.lextek.com/) is a leading supplier of high-performance tools for automatically indexing, searching, categorizing, summarizing and classifying text and other forms of digital knowledge. Lextek's technologies have been integrated into a wide range of Internet portals, as well as document and knowledge management systems. Lextek is a privately held company with headquarters in Provo, Utah, and has been supplying advanced technologies to software developers and OEM customers since 1993.
