

# There is a Coming Cancer Cure

Submitted by: Authentic Media (Bletchley)

Thursday, 8 April 2004

---

Dr Francisco Contreras world renowned oncologist and director of the Oasis of Hope hospital in Mexico will be visiting the UK from April 16th - 21st to promote his book *The Coming Cancer Cure* (Authentic Media). Dr Contreras is a recognised authority on conventional and alternative cancer therapies and health issues and is committed to improving the quality of the physical, mental and spiritual lives of people around the world.

Among those successfully treated at the Oasis of Hope hospital include Don Factor, son of Max Factor. He said 'In November 1986 I was diagnosed with carcinoma of the lung. Doctors thought they could extend my life but not for very long. I decided to go to Dr Contreras. After initial treatment and a year of home therapy I was totally clear of cancer.

Doctor Contreras has conducted a retrospective study of metabolic nutritional therapy to document the five-year survival rates of his cancer patients. These patients had various cancers in stage IV and conventional therapy had failed them. The results were compared to the survival rates in stage IV cancer patients, who receive conventional therapy only:

A report published in the American Cancer Society *Cancer Facts & Figures 2001* demonstrated that survival rates (over 5 years) were significantly higher in patients treated at the Oasis of Hope hospital. In the case of Prostate Cancer Oasis achieved an 86% survival rate compared against 33% from conventional therapies.
