New partnership promotes secure email security appliance

London, UK (14th April 2004) – BorderWare technologies announced today that it has signed an agreement that will enable Civica, one of the UK's most experienced providers of public sector consulting, software and services, to resell MXtreme Mail Firewall, the number one email security appliance. Civica provides software and services to local authorities, criminal justice organisations, healthcare and education establishments as well as key markets in the private sector.

MXtreme is the only email security appliance with a solid security foundation based on 10 years of real-world deployment experience and an EAL4 certification background. It is this qualification that has attracted Civica to MXtreme as no other email security product available on the market has this high level of security built-in, which is a key factor when selling to the public sector.

"MXtreme has proved itself to be a formidable force against the risks that threaten email," comments Stephen Hedegaard, Sales Director of Civica Services.

MXtreme provides complete protection, defending an organisation's email systems from denial-of-service attacks, spam, viruses and malformed message and protecting confidentiality with encrypted delivery and secure web mail. MXtreme is already in use by many local Government and health authorities and it is envisaged that this new relationship with Civica will help build upon this market even further. BorderWare Technologies was introduced to Civica through a mutual partnership with distributor, Arc Technologies.

Peter Cox, Vice-President of BorderWare Technologies says, "We are pleased that Civica has agreed to promote MXtreme and look forward to a fruitful relationship. As Government organisations become more focused on email communication it is gratifying to see that security is their number one priority."

###

About BorderWare

BorderWare Technologies Inc. provides comprehensive network firewall+VPN and "application-specific" appliances for email, DNS, and document collaboration, to protect mission-critical network resources in sensitive environments and are deployed at various military, intelligence, defence, national security agencies, and corporations worldwide. BorderWare has affiliations and partnerships with some of the industry's most prominent companies in Internet infrastructure and security including Cisco Systems, Sun Microsystems, RSA Security, Research In Motion, Brightmail, Kaspersky Labs, BlueCat Networks, Network Engines and SSH Communications Security. BorderWare's products are distributed through a worldwide channel of more than 500 resellers.

Founded in 1994, BorderWare is a private company headquartered in Toronto, Canada with offices in London, Frankfurt, Stockholm, Dubai, Dallas, San Jose, and Washington DC. For more information visit
