

Hollands Recycling becomes latest customer for REgenerist

Submitted by: Clarity Public Relations

Thursday, 22 April 2004

Cedilla Systems, one of the top three Microsoft Certified Business Partners in the UK specialising in Microsoft Navision software, has today announced Hollands Recycling as another customer for its REgenerist solution. REgenerist has been developed specifically for the waste management and recycling sector; it is a best-of-breed software system covering collection, treatment, recycling, recovery and disposal of a wide variety of waste types.

Established in 1955, West Midlands-based Hollands Recycling processes in excess of 60,000 tonnes of recyclable waste each year. The company's principal activity is paper recycling but, since the advent of the Packaging Regulations, waste wood and polythene have been added to the list of materials that are currently reclaimed.

REgenerist will offer Hollands a number of significant improvements to the way it currently operates: it will improve cost controls, remove duplication of effort, improve budgeting and auditing processes and support the company's plans for future growth.

The REgenerist customer base is rapidly expanding throughout Europe, and it is widely regarded as the most technologically advanced packaged software solution for the industry. ERP (Enterprise Resource Planning) solutions are not unknown in the industry, but few can match REgenerist in terms of functionality available for the price, speed of implementation and flexibility.

Peter Holland, Managing Director of Hollands Recycling, commented: "We were very impressed with REgenerist and by the Cedilla consultants we dealt with. The product has features that have been specifically designed to meet the needs of businesses such as ours and we expect to see some real improvements to the way we use and manage information in our organisation."

"REgenerist sits on the Microsoft platform, which is very user-friendly," continued Holland. "REgenerist will allow us to integrate all the essential management information that we currently keep on Excel, Word and Access."

Mike Dickson, Managing Director of Cedilla Systems, stressed the importance of having an integrated system for waste management businesses. "We are delighted to be able to provide Hollands Recycling with REgenerist and are confident that it will contribute greatly to their continuing success. There are significant efficiency gains to be had from using a system like REgenerist. It automates many disparate processes that can otherwise take up valuable resources."

Research carried out by Cedilla Systems in 2003 found that up to 90% of waste management companies are not using an integrated IT system, which means they are unable to keep pace with the changes in legislation affecting their sector and they will struggle to produce accurate reports on the performance of their business, both financially and operationally.

About Cedilla:

Cedilla Systems Ltd specialises in the development and implementation of tailored business software solutions for small to medium sized businesses in the UK. Cedilla's success has been built on the powerful Navision software range, an ERP software package from Microsoft Business Solutions which is sold and supported in 108 countries worldwide. Cedilla is a Microsoft Certified Business Solutions partner, staffed by certified professionals dedicated to providing customised solutions, training and support services.
