

# C2C Systems and QStar Technologies Offer Integrated Archiving Solution.

Submitted by: C2C Systems

Tuesday, 11 May 2004

---

C2C Systems and QStar Technologies, Inc. have integrated their Archive One and Hierarchical Storage Management (HSM) products, providing mid- to large-size companies with an efficient and compliant e-mail archiving and storage solution.

Knowing that customers want to improve system efficiency by offloading e-mail from their primary Exchange servers to an archive, C2C Systems has opened up e-mail archiving to a wide range of media. The partnership with QStar, a leading company in data management, brings e-mail archiving to optical disks, ultra high capacity tapes, Digital Video Disks (DVD) and CD recordable devices.

"QStar migrates all types of data into archives based on the policies that are set," says Todd Deveney, Vice President of Sales, QStar Technologies, Inc. "We offer corporations the ability to secure data in either a WORM (Write Once Read Many) media or rewritable media. It's an easy integration; the way we receive data from C2C's Archive One is the way we give it back."

Because customers are not limited to a particular storage solution, the C2C/QStar archiving solution will cater to varied customer needs, such as regulatory compliance or e-policy management, and ensure that the archive will be immediately accessible for years to come.

"The key feature of any archiving solution is the architecture of the product. Does it fit in with your messaging strategy? Will the supplier be in business seven years from now?" says Dave Hunt, CEO of C2C. "By using the QStar/C2C Systems archiving solution, you can be sure that the data will remain accessible."

## About C2C

C2C ([www.c2c.com](http://www.c2c.com)) provides a range of e-mail lifecycle management software for Microsoft Exchange. Our solutions for email archiving, mailbox size management, search and discovery are used by three million users at more than 2,000 organisations worldwide. C2C, a Microsoft Gold Certified Partner, is headquartered in Reading, U.K., with U.S. offices in Springfield, Mass.
