The COLLAGEN COLLECTION from NATURAL LABORATORIES LTD

Naturally put back what nature takes out.....

The collagen from Natural Laboratories is one of the purest forms of protein available. It is completely natural and does not contain any fat, cholesterol, additives or preservatives. Regular supplementation with Natural Laboratories' Collagen Collection will effectively replace the collagen that the body produces in decreasing amounts from the age of 25.

Collagen is the most frequently occurring vital protein in mammals and represents about 30% of mammalian protein. From the age of 25, collagen levels reduce at about 1.5% every year as part of the ageing process. This contributes to skin losing its elasticity, hair and nails becoming brittle and a general stiffening of joints. By the age of 45 collagen levels have reduced by up to 30%.

Since the 1970s, studies have been carried out which clearly show that the intake of collagen is not only able to replace missing collagen, it can also activate the formation of new collagen by the body.

Supplementing the body's natural 'supply' of collagen directly helps the body's skin, hair and nails as well as helping to fight joint pain and arthritis.

Younger Looking Skin

Collagen helps to build the connective tissue in skin. It is this connective tissue that effectively cushions the skin making it firmer and more elastic. Supplementing collagen can help to reduce the fine lines and wrinkles in just a few weeks.

Stronger Thicker Hair

One of the reasons hair becomes thinner and more brittle during the ageing process is the reduction of protein in the hair follicle. By taking Collagen Collection capsules the levels of protein are increased.

Strengthens Brittle Nails

Protein is also essential for the growth of longer, stronger nails.

Natural Laboratories does not claim that the Collagen Collection is the 'elixir of youth' – it is however a completely natural way of replacing a vital protein in the body that directly affects the signs of ageing.

Collagen Collection capsules and sachets can be ordered by phoning 01306 877162 or visiting www.collagencollection.com

Research results

Health & Beauty - University of Würzburg Germany

The results of a survey by the Medical Clinic of the University of Würzburg (Prof. Heinrich Kasper, 1995 a leading German nutritionist) showed that the long term consumption of collagen was found to increase the stability and resilience of protein structures. This in turn led to an improvement in the quality of brittle fingernails and the improvement of hair.

Stronger thicker hair - University of Milan

A study by the Department of Pharmacology at the University of Milan (Prof. Morganti, 1983) showed that the activity of hair follicles was - directly or indirectly - increased by the consumption of collagen.

Results taken from patients after a three-month treatment showed an increase in hair diameter of up to 49% in some cases, with an average increase of 35%.

Stronger thicker hair - Department of Food Research and Nutrition in New Jersey

A study by the Department of Food Research and Nutrition in New Jersey (USA) in 1976 concluded:

“Approximately 70% of the subjects showed increases in hair diameter ranging from 5% to 45%. Within six months after cessation of the collagen dosing, hair diameter reverted back to its original level.”

Joint & arthritis pain relief - Harvard Medical School

A huge number of papers have been written about the role of collagen in joint and arthritis pain relief.

Some studies such as a recent research exercise at the Harvard Medical School showed up to 90% of the subjects receiving some pain relief within 45 days of taking collagen sachets.
