

PolySpace Technologies and MSL Engineering Integrity Systems bring more safety to critical software systems

Submitted by: Prowse & Company

Friday, 14 May 2004

PolySpace Technologies and MSL Engineering Integrity Systems have entered into a strategic partnership which combines the PolySpace software verification tool with MSL's expertise and consultancy in software testing schemes. Under the agreement PolySpace will have access to MSL's consultants to deliver support to PolySpace customers, and MSL will have open access to PolySpace's unique static verification software suite.

Ken Nathan, UK General Manager of PolySpace, commented: "Our customers develop software for very expensive and sometimes life-critical applications and so they need to produce systems with the confidence and assurance of meeting the highest possible safety standards. This alliance brings together the best tools and expertise for them to deliver high quality systems in a realistic time."

Alain Deutsch, Chief Technology Officer PolySpace added: "We are delighted with the endorsement and support of MSL for our technology. MSL is one of the most highly regarded teams of consultants in this field with extensive experience of ensuring embedded software systems are rigorously verified and tested."

MSL helps companies with the design, implementation and testing of software systems to ensure they work as designed and that they meet the safety requirements of the application. The safety standards are critical in MSL's primary target markets including aerospace, automotive, rail, avionics, defence, energy, medical, and telecommunications.

"MSL is very pleased with the new partnership and collaboration with PolySpace." said Dave Carrington, Marketing Director of MSL. "Working with PolySpace will ensure an advantageous strategic fit within our target markets. MSL is dedicated to "expertise delivered" providing safety critical software consultants working to IEC 61508 and other associated standards" Dr Chris Damski, Managing Director added: "This mutual cooperation through both tool and services exploits the current market situation to the benefit of our clients."

About MSL Engineering Integrity Systems

MSL Engineering Integrity Systems provides expertise to deliver software solutions for mission and safety critical real-time systems. MSL has over a decade of experience in the safety critical market throughout the UK and Europe with customers predominantly in the aerospace, automotive, defence and rail industries.
