Kommunicate, specialist supplier of business automation and compliance solutions, changes name to Avanquest Kommunicate

Under restructuring by parent company BVRP software, Kommunicate Ltd has changed its name, with immediate effect, to Avanquest Kommunicate. The move follows the acquisition by BVRP of a third UK Company, and the decision to unify and re-brand Kommunicate, Guildsoft and Media Gold as Avanquest UK Limited.

Avanquest Kommunicate will be the Corporate Solutions focus of Avanquest UK Limited and will continue to provide server dependent solutions for Enterprise environments. Avanquest Kommunicate solutions aim to improve internal and external communications and streamline business processes, providing their clients improved infrastructure to manage and increase business. The implications created by recent compliance legislation in the US relating to storage and use of business information has created an opportunity for Avanquest Kommunicate to focus on providing solutions that satisfy regularity guidelines now, enabling clients to have systems in place when legislation is introduced in the UK.

Chris Thompson, CEO of Avanquest UK Limited states that "legislation and regulatory structures relating to compliance are constantly being introduced in the UK. Avanquest Kommunicate is already installing solutions for clients that comply with regulatory processes and I anticipate that this focus of our business will treble over the next three years".

The Avanquest Kommunicate range of solutions includes:

RightFax - award winning enterprise network fax solution.

RightFax allows organisations to significantly reduce costs by integrating with core business applications and automating the flow of faxes, paper, electronic documents and data. Users can send, receive and manage faxes electronically reducing the time and costs associated with using traditional fax machines.

CallXpress - modular messaging network software that unifies voice, fax and email.

Access messages, voice, fax and email, through telephone, networked PC, or internet. Single point of access and control whether you are office based or on the road.

CallXpress integrates with MS Exchange and Lotus Notes and supports all telephone systems, including voice over IP. Seneca - AVST's speech-enabled call management module that is sold in conjunction with CallXpress, to allow management of calls and messages by voice commands.

OnBase - high-powered document management and archiving.

OnBase electronically captures, stores and manages every document generated or received by a company – including paper, reports, application files, e-mails, and web content. Retrieve, revise, annotate, distribute, or post to a website. Integrates seamlessly with ERP, CRM, and other e-business applications to create a single point of online access to all relevant information.

Text Message Server - SMS messaging on any Networked PC, to and from mobile phones.

SMS is a convenient and fast means of communication with cellular telephone and pagers. TMS brings SMS to the desktop via a LAN-connected PC with the benefit of speed, low cost, accuracy and confidentiality.

Monarch and Monarch ES/RMS - The world's leading report mining and data analysis tool

Monarch, a powerful data analysis tool, transforms report files into data without programming, allowing users to easily sort, filter, summarise and graph report data and export to Excel, Access, etc. Monarch Pro can access additional data sources: Excel, Access, ODBC, HTML, etc and web based solutions Monarch/ES and Monarch/RMS brings server based technology to an organisation. Monarch/ES builds an indexed report archive for secure report access and delivery via a web browser. RMS provides the same web-based report-to-data benefits 'plugging into' any enterprise report/document management solution.

PC Guardian - delivers data protection and anti-theft solutions.

Encryption Plus Hard Disk uses the AES algorithm with a 256-bit encryption key to protect a computer's entire hard drive, providing 100% access control to Windows NT/2000/XP, applications, and data.

Encryption Plus Email 3.0 is an enterprise email data protection solution delivering email security without the cost of PKI-based solutions and Encryption Plus® CD-ROM is ideal for secure publishing and information distribution applications.
