

# SafeNet Announces New License Management Support for Software Application Developers

Submitted by: Strategic Public Relations Ltd

Tuesday, 1 June 2004

---

Customers Praise the Expanded Capabilities for the Sentinel LM 7.3 Product

SafeNet (NASDAQ:SFNT), setting the standard for information security, today announced the addition of new license models for the Sentinel LM 7.3 software licensing and protection application.

Windows software vendors can now leverage out-of-the-box license models based on units of measure or capacity, in addition to other standard license models such as evaluation licensing, feature-based and lease/rental models. Sentinel LM 7.3 also provides new ease-of-use functionality for application shelling and license generation.

"We're pleased that Sentinel LM continues to be enhanced and improved," said Steve Watt, senior director of marketing for Timberline, a Best Software company. "Timberline develops Timberline Office, integrated financial and operations software for the construction and real estate industries. The ability to provide modular and flexible solutions for our customers is an important part of our product strategy," he said.

"We're pleased to see the new license models for Sentinel LM 7.3 as a show of SafeNet's commitment to the Sentinel LM product," said Bill Hasenjaeger, product marketing manager of CGTECH, a leader in software technology for manufacturing.

Sentinel LM 7.3 allows software application developers to easily add complex licensing to their applications. Enforcing license agreements is a primary concern for application developers to ensure that fair compensation is received for every license in use. Sentinel LM allows developers to focus on their core application, leaving the complex license model and server support to Sentinel LM. Sentinel LM allows developers to incorporate the licensing into their application and maintain a single code base that can be configured with multiple license options as needed for their customers. This reduces administration and maintenance for the application developer.

"The Sentinel LM offering continues to keep pace with the rapidly evolving software licensing market," said Charles Baumert, director of product management for the Sentinel Business Unit. "Sentinel LM 7.3 enhances the ease with which our customers can add license management functionality to their applications, while adding new features such as capacity licensing to further improve options available to our customers. We plan to expand on our LM product, by offering integration with major ERP/CRM systems and adding new security enhancements in our next release of Sentinel LM, scheduled to be available in the latter part of 2004."
