

Automata's unique "Total Business Protection Package"

Submitted by: Automata

Wednesday, 2 June 2004

On 14 and 15 June Automata Global Business Continuity Services (<http://www.automataservices.com/school.htm>) will run an innovatory two day Business Continuity Masterclass led by their business protection college staff. This uniquely provides:

- A free CD with expert business continuity tools such as risk/impact questionnaires, checklists and plan templates to use within their organisation.
- Free Affiliate membership of the either Business Continuity Institute (BCI) or Institute of Risk Management (IRM).
- A free business continuity help desk for students' follow up enquiries and ongoing implementation concerns within their organisation.

Garry Poole the CEO of Automata said "How may ICT support professionals in enterprises of all sizes, schools, colleges, hospitals, police services etc constantly worry about how dependent their organisations have become upon the systems they run? We will show delegates how to cost-effectively protect their organisation from any unforeseen impact such as data loss, terrorism, cyber attack, fire, flood, power outage etc. In addition, uniquely we will leave delegates them with Automata's superb FREE tools and ongoing support." In 1999 Garry was voted UK Business Continuity Manager of the Year and was a founder member of the Business Continuity Institute.

The course will be held at Sedgebrook Hall, a first class conference centre in the beautiful Northamptonshire countryside (the "Rose of the Shires").

About Automata Ltd

Automata was formed to serve partners and clients from all industry sectors across the globe. In addition, it aims to assist public sector organisations that are involved in crisis management and the development of resilient communities. Automata aims to be the world's number one business continuity company! True to its motto, "Simplicity, Resilience and Control", Automata provides a "one stop shop" of innovative products and services to enable those involved in business continuity to cost-effectively protect their organisations and professionally manage unforeseen incidents. More information about Automata is available at <http://www.automataservices.com>.
