Net Report announces Nexus Technology as its first channel partner in the United Kingdom

Submitted by: Cryptzone UK Ltd

Thursday, 1 July 2004

Paris, 1st July 2004: Net Report, the leading independent vendor of reporting solutions for monitoring and analysing performance of IT devices has chosen Nexus Technology as its first UK channel partner. Nexus will resell Net Report Log Analyser and Net Report Monitoring Center, as well as a range of tailored service offerings.

Compatible with more than 30 leading networking systems, Net Report solutions provide the ability to deliver accurate and customisable reports, which enable IT administrators to improve the performance and integrity of their organisations' network architecture.

• Net Report Log Analyser is a powerful reporting tool, which provides management reports relating to the activity and performance of multiple IT devices. Net Report Log Analyser reports on logs from Firewalls, VPN, Intrusion detection products, web & proxy servers.

• Net Report Monitoring Center is a real time information management solution, which centralises, analyses, alerts and reports on the events logged by disparate systems to one central data store. Real time management and flexibility of the Net Report Monitoring Center allows organisations to pro-actively respond to issues by filtering log information, generating alarms (Pop Up, Email, SNMP Trap, Pager, SMS) and enabling personalisation of the resulting reports (graphs, tables, charts).

"Net Report V3 was exhibited at Info Security 2004 in London, where many UK organisations expressed significant interest in the consolidated reporting capabilities of our products," says Franck Burtin, Vice President of Net Report EMEA. "Nexus understands the underlying technology of our solutions and has a reputation for providing high quality services in the area of IT security and business intelligence, so is an ideal partner to communicate the benefits of the Net Report solutions."

"Accurate information is key to making good management decisions", explains Robin Saunders, Managing Director of Nexus. "Our company has a long history of providing business intelligence solutions for our clients through the Dataset range of products, so Net Report is a natural complimentary product for us to adopt."

About NET Report
Net Report is a French based company specializing in log analysis and proactive event management tools (filtering, alerting & reporting) with expertise in databases, log analysis, reporting, alerting and intelligent event processing. For more information on Net Report, visit www.netreport.fr

About Nexus
Nexus Technology Ltd. is a leading provider of secure IT solutions and a developer of innovative business critical software applications. Established in 1992, Nexus has evolved from a software development and training business into a true systems integrator selling an extensive portfolio of market leading security software products, which are complimented by first class technical services. The growth of Nexus reflects an extensive knowledge and understanding of the essential contribution that IT plays in

successful businesses. For more information on Nexus, visit www.nexus-technology.co.uk or www.enexus.co.uk
