MXtreme betters CipherTrust with Common Criteria Certification, sophisticated anti-spam engines and advanced management/failover capabilities

DALLAS, TX and TORONTO, ON – July 6, 2004 – BorderWare Technologies Inc., today announced that Federal Computer Week (FCW), an IT publication focused on government IT buyers, rated MXtreme the most secure and best price-performance solution for email security in the July 5, 2004 issue. The review also gave high marks to BorderWare's MXtreme for its distinctive features over CipherTrust's IronMail including MXtreme's Common Criteria EAL4+ security certification, sophisticated anti-spam engines, and advanced management and failover capabilities.

FCW reviewer Andre Kvitka, principal of an information technology and web development company, praises MXtreme for its "host of e-mail perimeter security features, including antivirus protection, mail-encryption features and everything but the kitchen sink to combat spam." In addition he writes: "One of the major benefits of MXtreme is its reporting and auditing capabilities.... granular administration, allowing multiple administrators to control specific portions of the appliance… [and] another plus for MXtreme is its failover capabilities. This is a tremendous advantage for agencies where e-mail communication is of paramount importance."

When compared to CipherTrust, Kvitka writes: "BorderWare and CipherTrust excelled in providing a feature-rich administration interface, customisable features, and extensive monitoring and reporting capabilities," and further states, "CipherTrust's product is the most expensive, but we found BorderWare's product just as capable at a fraction of the cost…."

"The bottom line is that MXtreme is reasonably priced considering the number of features and technology that are packed in this appliance. Also, its Common Criteria certification could be appealing for agencies requiring a high level of security."

"This recent coverage from FCW again confirms what customers are discovering each day about our products – MXtreme provides the most comprehensive approach to email security by incorporating best-of-breed technology with unmatched price performance," said John Alsop, CEO, BorderWare Technologies. "For any company that's looking for a perimeter email security solution, clearly, MXtreme should be on your evaluation shortlist."

About MXtreme

MXtreme Mail Firewall, The Benchmark for Email Security, is the ideal platform to replace existing mail gateways with a Certified Secure solution. It installs at the network edge to deliver the most comprehensive perimeter security for an organization's email infrastructure. MXtreme is the only mail firewall to gain a Common Criteria EAL4+ security certification, assuring users that their email systems are protected against Denial-of-Service attacks like MyDoom, buffer overflows, directory harvesting, spam, viruses, and other vulnerabilities that could paralyse email communications. MXtreme also provides the industry's first failsafe clustering architecture for high availability to ensure zero downtime, zero

latency and zero message loss.

About BorderWare

Founded in 1994, BorderWare Technologies Inc. is a leading provider of network security solutions for enterprises and government. BorderWare has more than 5000 customers worldwide, with systems deployed at various military, intelligence, defence, national security agencies, and corporations. The company has developed affiliations and partnerships with some of the industry's most prominent companies in Internet infrastructure and security including Cisco Systems, F5 Networks, Sun Microsystems, RSA Security, Research In Motion (RIM), Brightmail/Symantec, Kaspersky Labs, and Network Engines. BorderWare is a private company headquartered in Toronto, Canada with offices in London, Frankfurt, Stockholm, Dubai, Ottawa, Dallas, San Jose, and Washington DC.
