

# Acal Networks appointed to distribute Wireless Security Solutions from Fortress Technologies

Submitted by: Napier

Thursday, 30 September 2004

---

Acal Electronics' Networks Division has been appointed as distributor for the industry-leading family of security gateway solutions for ensuring privacy of wireless networks and mission-critical enterprise applications from Fortress Technologies Inc. across the EMEA region.

Fortress Technologies' AirFortress product family offers flexible, market-proven security to address the risks and vulnerabilities of wireless networks, and provides the highest level of commercially available wireless security. It is an easy-to-use security solution that supports and integrates with wired networks to ensure the business integrity demanded by the global 1000, government, financial and health care organizations. Fortress is one of the only companies to offer the end-to-end security consistent with the US Department of Defense's new directive for wireless devices and use.

The AirFortress family supports multiple wireless networking standards, including 802.11a/b/g/n, 802.16 (WiMax) and others. The gateways offer a single-platform to manage Privacy, Access Control & Authentication, and provides networks with Fortress' Three Factor Authentication™ (authenticating at the network, device and user). With Fortress, wireless security and policy enforcement is administered centrally, eliminating administrative burden and lowering the overall total cost of ownership for wireless systems. Additionally, Fortress protects existing system investment by offering support for a wide range of current and legacy device platforms including DOS handhelds.

"Acal Networks offers us the opportunity to quickly expand our presence across the EMEA region," said Bill Wall, Sr. Director of Worldwide Channel Sales – EMEA for Fortress Technologies. "We chose Acal because of their proven expertise in wireless networking technology and their logistics capacity, which will ensure customers receive the high levels of service and support they demand."

"Wireless network security is one of today's biggest concerns for enterprises, governments and the military," said Paul Reeve, Director of Acal Electronics. "By supplying Fortress Technologies AirFortress family, we can offer our customers the highest level of commercially available wireless security."

## About Acal Networks

Acal's Networks Division offers a wide range of wired and wireless access products from many of the world's leading manufacturers, including Motorola Canopy, Proxim, Allgon and Orthogon . In common with Acal's other divisions, it has established a reputation for supporting its resellers and customers by adding value in many ways, including assistance with system and product design, installation and maintenance services.

## About Fortress Technologies

Fortress Technologies' AirFortress product family offers flexible, market-proven security to address the risks and vulnerabilities of wireless networks. It is a trusted and easy-to-use security solution that supports and integrates with corporate wired assets and systems to ensure the business integrity demanded by the global 1000, government, financial and health care organizations. Providing the highest

level of commercially available wireless security, Fortress meets the government's rigorous standards for wireless network security, under the Federal Information Processing Standards (FIPS 140-2) validation program, and is one of the only companies to offer the end-to-end security consistent with the Department of Defense's new directive for wireless devices and use. For more information, contact Fortress Technologies at [info@fortresstech.com](mailto:info@fortresstech.com) or call +1 813-288-7388.
