---

In perfect time for New Year, 'new you' resolutions, Elite Beauty Services, one of London's leading beauty treatment salons, is offering a new and effective treatment that makes clients look and feel like an A-list celebrity.

A new 'miracle therapy' treatment that firms skin and tones muscles in the face and body, 'Sculpture-Tone' is a new health and beauty breakthrough to help people become slim and toned without the need to undergo surgery. After several treatments, Elite Beauty Services says that its clients have each lost three to five inches from their problem areas.

Unlike endermologie and liposuction, Sculpture-Tone is a patented, technologically-advanced treatment that significantly reduces fat and cellulite. It re-shapes and tones the body by stimulating and improving the body's circulation and by targeting specific problem areas that cannot be tackled by exercise alone.

The first and only treatment of its kind available in the UK, it works by applying 'negative' pressure to certain areas of the body, helping to relieve the atmospheric pressure and thus breaking up fatty tissue, which is eventually disposed of through the body's lymphatic system.

Owner and Beauty Therapist, Gita Curniffe, says: "We are delighted to offer this new non-surgical treatment, which offers an effective alternative to people who would not consider cosmetic surgery. It gives patients a unique and totally painless solution for cellulite and greatly helps with muscle toning and Inch loss."

Elite is the first clinic in the UK to offer this revolutionary treatment.

The actual process involves applying a series of cups to various areas of the face and body. Each one creates a vacuum as it pulls, holds and releases each target part of the body. The process accelerates the body's lymphatic and circulatory system and most people see a drastic improvement after just four weeks of regular treatment.
