

# FAST LANE PROVIDES CISCO STORAGE NETWORKING COURSES TO MEET DEMAND FOR NETWORK DESIGN AND SUPPORT SPECIALISTS

Submitted by: Compass Rose Marketing & PR

Thursday, 2 December 2004

---

Leading training company provide the latest Cisco Storage Networking courses to meet burgeoning need across all vertical markets

Storage has become a critical issue to the enterprise today, as it becomes apparent that there are serious ramifications of not having information immediately accessible to the business in order to facilitate informed decision-making. There are also a number of issues pushing storage to the top of the business agenda, including complexity, cost and pending legislation, which imposes strict rules for data storage. It is therefore key for IT personnel to have a thorough grounding not only in storage technology, but also in installing and configuring new installations, and in troubleshooting techniques in new and existing implementations. Industry leading Cisco courses provided by Fast Lane Consulting and Education Services Ltd can provide just that.

Fast Lane are able to offer the courses required to achieve the following certifications: Cisco Storage Networking Design Specialist and Cisco Storage Networking Support Specialist.

The Cisco Storage Networking Design Specialist certification validates an individual's knowledge of selecting and integrating Cisco storage products to design a highly scalable, efficient, high performing storage networking solution based on converged architecture. The entry level for this course is a valid CCNA or CCDA.

In addition, Fast Lane is running the courses required to obtain the Cisco Storage Networking Support Specialist certification, which validates an individual's knowledge of installing, configuring and troubleshooting Cisco storage products. This qualification ensures Cisco networks operate at the highly performing and scalable, efficient fashion to which they are designed.

"Storage is a problem for all industries and with looming legislation, for example, the Freedom of Information Act, public and private organisations need to deploy robust technologies such as Cisco's storage networking solutions to future-proof their businesses," comments Peter Olive, managing director, Fast Lane. "As a Cisco Learning Solutions Partner (CSLP), we are able to offer courses which mirror the ever changing needs of the market and fine-tune them to each vertical market's demands."
