

Announcing Studio to Go! - a Linux Live CD of Music Software

Submitted by: Fervent Software

Wednesday, 15 December 2004

London, UK. 15th December 2004 - Fervent Software would like to announce the immediate availability of Studio..to go! - a bootable Live CD of integrated MIDI and audio sequencing, score and synthesis software for the demanding musician and composer. Studio..to go! offers one of the most sophisticated combinations of music software anywhere in a single value-for-money package.

Studio..to go! runs entirely from the CD on Windows compatible 32-bit PCs and requires no installation. Combine it with a USB memory stick and you can take both studio and compositions around with you in your pocket. Because the software isn't installed and runs in its own environment you don't need to worry about compatibility issues with existing software on your system.

The package includes the powerful Rosegarden MUSIC sequencer and score package, the Digital Audio Workstation Ardour, the JAMin mastering tool, Hydrogen drum machine and a large selection of audio plugins and virtual instruments along with CD ripping and burning software. Studio..to go! also allows you to make use of any existing VSTs and Soundfonts that you may already have installed on your system.

Fervent Studio..to go! is available from the Fervent website for 49.99GBP including postage and packing. The price includes bootable CD in mini DVD case, "getting started" notes, tutorials, introductions to all of the music applications included and 30 days email support and access to Fervent Forums. UK customers ordering before 16th December should still receive in time for Christmas.

For more information and to order Studio..to go! please go to:
