

iLight features colour touch screen at Integrated Systems Europe show

Submitted by: Antimony Communications

Wednesday, 26 January 2005

A colour touch screen is the latest addition to iLight's range of intelligent lighting controls. Taking pride of place on iLight's stand at the Integrated Systems Europe exhibition in Amsterdam, the LCD screen offers a completely flexible means of controlling building lighting systems.

Fully configurable via a personal computer, the 320 x 240 pixel control panel in the iCAN range can display plans of the building to allow fingertip selection of any previously programmed lighting scene. Plans, photo quality backgrounds, button styles and customer graphics can be downloaded to customise the display.

Its intuitive interface is particularly useful for complex lighting systems, as it offers multiple control functions and can be tailored to the precise needs of the user. The unit can be seamlessly integrated with third party equipment for controlling audiovisual equipment, intruder and fire alarms and opening and closing blinds and curtains for example.

The control panel bezel is available in stainless steel and brass finishes, and the unit can also be controlled by a hand-held remote control via the integrated infrared receiver.

Notes for editors

The Integrated Systems Europe exhibition and conference takes place at the RAI Centre in Amsterdam, The Netherlands, from 26 to 28 January 2005 (www.iseurope.org).

iLight was acquired in September last year by Polaron plc (www.polaron.co.uk). In 2004, Polaron floated on AIM, the Alternative Investment Market, and the group is continuing to expand rapidly, both organically and through acquisition.
