

SkillSoft opens up its online mentoring services

Submitted by: On Tap Communications

Tuesday, 8 February 2005

SkillSoft, the global e-learning provider, has extended its mentoring services to make them available through third party learning management systems.

This opens up online mentoring to a wide range of organisations – allowing employees to benefit from help and support provided by SkillSoft's specialised team who collectively hold more than 1,000 certifications and accreditations.

Organisations are typically using the services to support project managers, programmers, system engineers, system administrators, security technicians, database administrators and web designers through job-related examinations.

Examples of the supported certifications include: Microsoft Certified Systems Engineer (MCSE), Microsoft Certified Solutions Developer (MCSD), Microsoft Office Specialist (MOS), CompTIA A+, CompTIA Security +, Oracle Certified Professional (OCP), Cisco Certified Network Professional (CCNP), and Project Management Professional (PMP).

Mentoring services can be accessed for no additional cost by licensed users of SkillSoft's IT and project management course collections. For non-SkillSoft customers the mentoring services are available for a standard annual licence fee.
