Maltese Operator go mobile Selects VoxSurf's Advanced Unified Messaging System ---- Delivering next generation messaging solutions to secure future revenues

go mobile, Malta's foremost mobile phone operator, today announced the selection of VoxSurf's unified messaging platform VxOne. The next generation voicemail and advanced messaging solution, will be rolled out over the next few months to update go mobile's existing infrastructure. Once the solution is implemented, go mobile's customers will be able to experience the benefits of voice activated voicemail, unified messaging and voicemail to email services hands-on.

VoxSurf's VxOne unified messaging and voicemail platform was built from the ground up as a truly IP and open standards based solution ensuring flexibility, interoperability and ease of deployment. It can be integrated quickly and easily into existing operator networks and infrastructures ensuring seamless transition for customers and operators. Additionally, VxOne can easily be expanded and upgraded which made it ideally suited for go mobile's plans to migrate all users to a single service platform architecture in the near future.

"We are very confident that we have found a truly flexible platform for the roll out of our next generation messaging services," said Prof. Juanito Camilleri, CEO, go mobile. "The open architecture of VxOne is compatible with our existing systems and will also integrate with any new tools we may add in the future. This high level of flexibility and interoperability was one of the key decision factors for us. Through this agreement with VoxSurf, go mobile is continuing a process which will lead to the upgrade of the company's infrastructure with regards to messaging in general. As a result we shall be in a position to offer new value added messaging services," Prof. Camilleri commented.

"The deal with go mobile confirms the need for operators to start implementing new messaging systems now to ensure they can respond to future customer requests quickly," highlights Andy Munarriz, co founder, VoxSurf. "We are experiencing a new surge of demand indicating that operators and consumers are waking up to next generation messaging requirements. Future revenue is going to be dependent on these new services and therefore quick implementation and response times to launch new services are key. go mobile is leading the way and I expect other operators to follow."
