DIY SECURITY WITH THE BT HOME MONITOR

Take control of your home security with the BT Home Monitor, a professional quality wireless security system with a unique monitoring and messaging service that is so quick and easy to install, you can do it yourself!

The simple and affordable system features wireless motion sensors linked to an internet monitoring service, which raises the alarm if movement is detected around your home. If an alarm is triggered, the system sounds an 85 decibel siren to help warn off intruders, before going one step further and messaging up to three of your chosen Contacts with details of exactly what has happened.

The intelligent monitoring service can send alert messages by text to a mobile, by e-mail, and with a voice call to a land-line telephone for each of your nominated Contacts. You can manage this Contacts list yourself, keeping your own details, and those of your nominated friends, neighbours, or relatives continuously updated to ensure alert messages are received in the event of an alarm.

Each BT Home Monitor kit has a simple online registration process to access your alarm panel website 'homepage' – from here you can monitor your home anytime from anywhere in the world using the internet. This password-protected homepage allows you to manage your system, maintain Contact details, control the messaging service, and even decide what course of action should be taken if alarms are activated. The system can monitor for power failure and panic alarms, and can be expanded to monitor for water leaks and fire alarms. All this helps ensure the BT Home Monitoring service can protect your home and family 24 hours a day to give you complete peace of mind.

Because the BT Home Monitor is wire free, the system is ideal for homeowners who don't want their décor disturbed or for older properties where it's complicated to hide any wiring. The sensors even come with high-grade adhesive tape, so you don't need to drill any holes - just plug the control panel into the mains at any power socket, and connect it to your existing phone line.

Unlike most alarm systems, the BT Home Monitor is completely portable, so if you move house you can simply take the whole system with you.

The kit comes complete with a control panel, 2 wireless motion sensors, 1 wireless contact sensor for a window or door, 1 key fob, mains adaptor and telephone extension lead, and the first 3 months FREE connection to the monitoring and messaging service (ongoing charge of only £5.00 per month for the service after the first 3 months). Up to 25 additional wireless sensors can be added, including smoke, water and gas detectors, to give wider protection for your home and family

The system is available for a limited period only at the special promotional price of £149.99 (previous RRP £249.99). To order, simply call the approved BT reseller Intamac Systems Ltd on Tel: 0800 197 0074 and quote ref: KHC. The system is easy to fit, but if you're not confident with DIY, Intamac can also provide a national installation service: For just £99.99, a fully trained engineer will arrange to visit

your home and install the BT Home Monitor kit for you.
