Stunning 3D images of babies in the womb

Following on from the stories in this week's news regarding the election abortion debate, we have a set of images that may be useful to illustrate any related stories that you are planning.

Babybond are the UK's first and largest network of Ultrasound Bonding Scan studios. We have a collection of beautiful clear 3D images that show babies in the womb from eight weeks gestation.

If you would like to use any images or short videos please call Siân To on 08702 854854 / 07795 438854 or email sian@asclearas.com

Notes to editors:

The Babybond studios have seen a dramatic increase in parents seeking out their scanning service in order to gain the valuable bonding experience that they are not being offered through their hospital ante natal care.

Dedicated to offering parents to be this memorable experience, Babybond have four studios throughout the UK.

Each studio offers parents state of the art viewing facilities in a relaxing home from home environment.

Not having the constraints of a hospital means that the whole family can take the time to enjoy the first exciting meeting with the new addition, months before the baby is born.

The Babybond scan is performed by an experienced and qualified sonographer using the latest hi-tech 4d ultrasound equipment. The scan session is recorded onto DVD with your own choice of accompanying music, to provide a precious record of your pregnancy. As well as the important aspects of enhancing the bonding process with the unborn baby, the Babybond sonographer will, if requested, reveal the sex of baby - another service now unavailable at many NHS hospitals.

Babybond also offer client elected or referred conventional antenatal scan for low risk pregnancies.

These antenatal scan will be carried out on dedicated days with a midwife present at the studios. A traditional 2d Ultrasound bonding scan, a 3d / 4d bonding scan with a baby well-being checklist are also available.
