---

There are some things that no amount of make up can cover, in particular dull skin and tell tale ageing lines. Anti ageing creams may smooth the surface of the skin but facial lines occur at a much deeper level. Whether you want to banish those give away lines or simply freshen your looks, the answer lies in Restylane, the UK's leading, instant aesthetic treatment. Restylane provides a natural revitalising lift that lasts for nine long months.

Restylane is a crystal clear natural gel. It is injected into the skin to lift and smooth away lines to provide a natural beauty boost and restore your skin's youthful elasticity without loss of facial expression. It replenishes what nature gives you and time takes away. Treatment effects can be seen immediately and last six to nine months, far outlasting collagen. Restylane is ideal also for creating fuller and more sensuous lips that are soft to kiss and natural to touch.

Dr Nick Lowe, leading London cosmetic dermatologist at the Cranley Clinic, author of *Away with Wrinkles* says, "I am very comfortable treating my patients with Restylane because its safety and efficacy is clinically proven and my patients love its effects. In over 2000 Restylane treatments, I have only seen one mild reaction. I consider Restylane to be one of the safest soft tissue fillers available today."

The beauty of Restylane is that its safety and efficacy is clinically proven and this is what sets it apart from other injectable treatments. Made by Swedish company Q-Med, Restylane is the first hyaluronic gel treatment to be approved by the FDA in the United States, having undergone the most stringent testing in the world.

To find a Restylane trained cosmetic practitioner in your area and to ask any questions about Restylane, please call the freephone Restylane Information Line on 0800 015 5548.
