

Tufin Technologies Releases SecureTrack version 2.1 with Organizational Policy Compliance

Submitted by: Tufin Software Technologies

Wednesday, 25 May 2005

Ramat Gan, Israel, May 24, 2005 - Tufin Software Technologies Ltd., the leading provider of security policy auditing and compliance solutions, announced today the release of Tufin SecureTrack version 2.1.

Tufin SecureTrack is a comprehensive auditing, tracking and compliance system for Security Policies. Using SecureTrack, security officers can easily determine the exact state of their security policy, at any point in time.

SecureTrack version 2.1 contains many enhancements, including:

- Organizational Policy Compliance
- Online Management connection status monitoring
- Increased security with browser session monitoring and data encryption
- Easier configuration with automatic OPSEC™ trust establishment

Organizational Policy Compliance enables customers to define what changes are allowed within the security policy. Configurable risk levels can be defined per operation type for compliance analysis. If a security administrator breaches the Organizational Policy, real-time alerts are sent to registered SecureTrack users, and SNMP traps or SysLog messages are sent to SIM/SOC applications.

"SecureTrack 2.1 is a major step towards complete Security Policy change monitoring" said Ruvy Kitov, CEO of Tufin Technologies. "SecureTrack's unique ability to enforce Organizational Policy Compliance delivers a new level of auditing and control over Firewall policies."
