Trend Micro's Corporate and Consumer client security solutions now in beta offer customers advanced protection against malware including malicious spyware and viruses

London, U.K. - November 30, 2006 - Trend Micro Incorporated (<http://www.trendmicro.com>) (TSE: 4704, NASDAQ: TMIC), a leader in network antivirus and content security software and services today announced that the beta versions of Trend Micro OfficeScan, its corporate desktop security solution and Trend Micro Internet Security, its consumer security offering, work with Windows Vista to provide customers with protection against malicious code.

"We are pleased to have worked closely with Microsoft during the beta program of Windows Vista by ensuring that corporate and consumer customers using the beta and RTM can receive reliable malware protection from our TrendLabsSM researchers," said Lane Bess, president, North American operations, Trend Micro. "Windows Vista customers can rely on Trend Micro's long-standing security expertise to help protect their systems, just as we've safeguarded users of Windows client operating systems for nearly two decades. More than 260,000 downloads of the Windows Vista-compatible version of our Trend Micro Internet Security for consumers prove the value to customers of client-side security solutions from Trend Micro that complement the additional security features in Microsoft's new operating system."

"We appreciate Trend Micro's commitment and their early product support of Windows Vista by ensuring customers had Trend Micro's security product betas to test alongside our key Windows Vista release milestones," said Ben Fathi, corporate vice president, Security Technology Unit at Microsoft Corp. "Our security partners play a vital role in the early adoption, development and delivery of Microsoft technologies. By working closely with security partners like Trend Micro to deliver their OfficeScan and Internet Security offerings, we are helping to provide our mutual customers with a high quality product, seamless technology integration, and improved user experiences."
