New features include integrated database and integration of Active Directory Groups

23rd October 2007 - IGEL® Technology today released Remote Management Suite 2.07 enhancing the easiest to use thin client management system by making it now also the easiest to install.

IGEL's Remote Management Suite 2.07 includes a built-in Java database reducing the cost, complexity and time of setting-up thin clients. The integrated database is designed for smaller IT departments that want a one-click install for a fast and simple set-up. For the larger and more complex user requiring failsafe capability for high availability, Remote Suite Manager also offers the broadest range of third party database support on the market, including Microsoft® SQL Server, Oracle® and IBM® DB2®.

"With the integrated database in this latest version of IGEL's Remote Management Suite, you can manage thousands of thin clients in less than 15 minutes, after just one mouse click," said Stephen Yeo, worldwide strategic marketing director for IGEL Technology.
Integration of Active Directory for access control management has also been further enhanced in version 2.07. As well as importing users from Active Directory, IT managers can now also assign administrative rights to groups that are managed via Active Directory and automatically updated within the RMS.

Stephen Yeo commented: "The combination of Active Directory with the power of IGEL Remote Management Suite makes an unbeatable combination. This development further enhances the connect-and-go capability of the thin client; making it simpler and faster to manage whilst reducing the chances of error."

Lastly, this latest version includes a new feature for the automatic detection of disconnected thin clients. Devices that do not connect to the Remote Management Suite within a defined period of time are moved to a separate folder providing up-to-date information on the thin client infrastructure and ensuring dead devices are identified and isolated.

Remote Management Suite 2.07 is immediately available at www.myigel.com.

About IGEL Technology

IGEL Technology is one of the world's top 5 thin client vendors and is market leader in its home country of Germany (2006 IDC). The company produces the industry's widest range of thin clients, based on Linux and Microsoft Windows, giving customers access to the richest set of digital services through the very powerful, IGEL designed, firmware. Digital services include Citrix® ICA, Microsoft RDP, VDI compliance via the Leostream® client, terminal emulation, NoMachine® NX, VoIP, Java and native SAP®. All IGEL thin clients come with the bundled, easy to use, IGEL Remote Management software, giving customers maximum remote control with the minimum cost and hassle.
