

US femtocell firm RadioFrame announces first general manager for UK & Europe

Submitted by: Eureka Communications

Monday, 3 December 2007

LONDON and Redmond, WA – December 3rd 2007 -- RadioFrame Networks, a leading provider of femtocell and picocell radio access solutions, has announced the appointment of Mark Keenan as the company's first General Manager for Europe, Middle East and Africa. Keenan will head the full scope of the company's growing interests and operations throughout these regions. This move is part of RadioFrame's intentions to extend its local presence outside the USA.

Mark Keenan brings to RadioFrame over 20 years market experience in research, standardization, network operations, marketing, business development, infrastructure development, business start-up and senior management, at both the corporate and small business levels. Previous employment has included roles at Nokia Networks and BT Laboratories.

Says Keenan, "RadioFrame is beginning to break out as a global leader of a very exciting new segment of the telecommunications market. After spending months evaluating this opportunity, I am keen to bring my own experiences to RadioFrame and believe our market leading technology is going to shape an entirely new category of telecommunications equipment and services."

"Mark is an important addition to the RadioFrame team and will bring focus and energy to our growing global business opportunities," said RadioFrame Chief Executive Officer Jeff Brown. "Our OmniRadio solutions platform is at the forefront of an industry-wide movement toward wide-scale adoption of picocell and femtocell solutions that will provide new services and benefits for both wireless network operators and wireless customers. Mark's deep industry experience will assist in accelerating RadioFrame's growing momentum in these important regions of the world."

About RadioFrame Networks, Inc.

Headquartered in Redmond, Washington, USA, RadioFrame Networks, Inc. is the leading provider of complete radio access solutions for Tier 1 mobile operators and OEM partners throughout the world.
