'Diva Vita'

'Once in a while, a manufacturer comes up with a simple new design that you wonder why it has never been thought of before'.

The DIVA air conditioner, manufactured by Artel, requires NO external condensing unit box associated with traditional systems. Instead, all that is required are for two holes to be drilled through the wall for the inlet and outlet vents. Discreet, folding grilles are fed through the holes and quickly located and fixed from within the room. The unit is then fitted onto a wall bracket and plugged into a standard 13 amp fused electrical supply! Hey Presto!

The Diva eliminates pipe work and external condensers, the installation is quick and makes air conditioners practical in places where before an external condenser would have been unsightly, or just simply impractical.

The Diva can be mounted on internal walls (Doppio) or walls externally facing as shown in the diagram. Suitable for room sizes approx 6 meter * 5 meter per unit.

There are two styles available, for wall or floor mounting and they require no specialist skills to install.

The Diva opens the door for all types of qualified tradesmen to fit heat pumps for their clients.

End users are charged only 5% VAT on heat pumps making the Diva a discreet & cost effective solution.

If you don't want to see it from outside it has to be Artel by dpac!

dpac UK are exclusive agents and importers for Artel through the wall air conditioners in the UK.

Formed in 1981, Artel are a leading manufacturer, of a wide range of air conditioners, for commercial and domestic applications. Artel have firmly established themselves as manufacturers of technically advanced and high quality air conditioners.
