Trust Networks launches the first instant emergency broadband service

Submitted by: Cerco Communications

Monday, 7 July 2008

Trust Networks has developed a new emergency broadband service. The service can provide businesses with fast, secure wireless broadband wherever you can access a mobile signal.

Trust Networks emergency broadband service doesn't require a landline, as long as you have access to a mobile phone signal and a PC or laptop Trust Networks are able to provide you with a fast and secure broadband connection.

Nicholas Archer of Gyoury Self Partnership says of the service "When an office move robbed us of BT and broadband connections we were facing considerable difficulties. No longer able to communicate with customers our business was coming to a standstill, whilst our stress levels were running high. Our reputation was on the line. That's when Trust Networks stepped in and saved the day, providing broadband and email access for the office within hours."

Nicholas Archer added "This service is a must for any company that is serious about protecting their business and customers when your usual broadband access fails. Their unique service saved our business an immense amount of both time and money."

"Our emergency service is designed to provide businesses with a fast, simple and cost effective way of ensuring continuity of access to a fast and secure broadband service" says Paul Robson of Trust Networks. "Our engineers will be with you in hours and are then able to restore broadband and email access to your offices the same day. There is no waiting for equipment to be posted out and our team of professional technician's means that you are not left in the dark trying to solve the problem yourself" he added.

Currently the service is available to companies based in London and the South East but they are looking to expand this service nationally in the medium term.

ENDS
