Serving both telecommunications and large enterprise organizations, Intelliden provides innovative automation solutions for the most demanding, mission-critical networks

MENLO PARK, CA – December 18, 2008 - Intelliden Inc., a leading provider of Intelligent Networking solutions that enable organizations to control, manage and scale their networks, today announced that Intelliden received a “Positive” rating in Gartner’s recently published “MarketScope for Network Configuration and Change Management.”¹ Intelliden is one of 16 vendors evaluated in the report.

In the report Gartner notes that “NCCM has primarily been a labor-intensive, manual process involving remote access (for example, Telnetting) to individual devices and typing commands into vendor-specific command-line interfaces that are fraught with the possibility for human error, or creating homegrown scripts to ease retyping requirements. The enterprise network manager gave little consideration to rigorous configuration and change management, compliance audit or disaster recovery rollback processes when executing network configuration alterations, even though they were often the root cause of network issues. However, corporate audit and compliance initiatives are forcing a shift in requirements.”

“Our customers depend on their networks to perform mission critical functions such as provision broadband services, connect data centers and transmit financial transactions,” said Alan Black, President and CEO. “Intelliden remains committed to delivering innovative network automation solutions that help deliver highest levels of network reliability, security and agility. We are very pleased by our rating from Gartner and in our opinion, this rating is validation of our strategy.”

About Intelliden

Intelliden (www.intelliden.com) is a leading provider of Intelligent Networking solutions that enable organizations to control, manage and scale their networks. With Intelliden solutions, network-driven organizations can deliver next generation services; ensure compliance and completely automate network change and configuration management. Intelliden's innovative and patented solution is the first example of truly "intelligent automation" of networking devices. It is the only solution that gives companies the real-time state of the network-the key to ensuring accuracy across increasingly dynamic networks. Intelliden has been proven in global telecom companies, financial services organizations, federal government agencies and other businesses deeply dependent on their network.

About the MarketScope

The MarketScope is copyrighted 21 November 2008 by Gartner, Inc. and is reused with permission. The MarketScope is an evaluation of a marketplace at and for a specific time period. It depicts Gartner's analysis of how certain vendors measure against criteria for that marketplace, as defined by Gartner. Gartner does not endorse any vendor, product or service depicted in the MarketScope, and does not advise

technology users to select only those vendors with the highest rating. Gartner disclaims all warranties, express or implied, with respect to this research, including any warranties of merchantability or fitness for a particular purpose.
