---

Revelation's latest application development toolkit featuring WebOI.

London, UK – 14th January 2009: Revelation Software (<http://www.revsoft.co.uk>) are pleased to announce the release of OpenInsight Application Development Suite (OI) version 9.0, which includes a brand new Web2.0 compliant web enablement and development toolkit known as WebOI.

WebOI (<http://www.revsoft.co.uk/weboi.htm>) enables existing OpenInsight desktop GUI forms and lookup windows to be both quickly and easily ported to the Web. This includes all of the application's business logic maintained in its subroutines and functions, thereby allowing for maximum re-use, integration and further reduced development costs.

"With companies facing a new year with the challenge of getting more from their development teams and with ever decreasing budgets, we expect this new version to be welcomed by existing OpenInsight developers and other developers looking for a more flexible and economical solution to their current toolsets." Said Martyn Phillips, Business Development Manager, Revelation Software Limited.

This major release sees over 4,000 entity enhancements and amongst the horde of new features, this new version includes a brand new IDE, an enhanced .net based print engine, greater security, the Sierra Bravo Dashboard technology (a MultiValue CGI application that delivers the output of individual business metrics "widgets" to a dashboard web page), a brand new system Editor and many development time saving enhancements.

"We have extended OI by embracing new technologies such as Web 2.0, .Net, and a Dashboard interface with price points that address all market segments." said Robert Catalano, Director of Sales, Revelation Software, Inc.

"I am proud to release OpenInsight 9.0", said Mike Ruane, President/CEO Revelation Software. "We listened to what our customers have been asking for and we delivered in this release. I believe that OI 9.0 will allow Revelation-based applications to be extended into the foreseeable future. "

OpenInsight Development Suite (<http://www.revsoft.co.uk/openinsight.htm>) 9.0 is available through the dedicated OI WORKS program. Further details about OpenInsight and Revelation software can be found on [www.revsoft.co.uk](http://www.revsoft.co.uk) (<http://www.revsoft.co.uk>).

## About Revelation Software

Founded in 1982, Revelation Software delivers a suite of application development tools and companion services that take full advantage of leading network computing architectures, messaging, groupware, and client server platforms. Today, the company's flagship product OpenInsight is the only database development and application environment that provides both Windows and Java-based GUI tools to develop and deploy web-based and client server applications that support native and relational XML, SQL, Lotus

Notes and the leading legacy Multi-Value data sources such as ARev, Pick and IBM Universe. There are more than 1.5 million licensed users of Revelation products across 60,000 deployed sites worldwide. For more information visit [www.revsoft.co.uk](http://www.revsoft.co.uk).

Note to editors: Revelation Software is a division of Revelation Technologies. Revelation Software, OpenInsight and JOI are trademarks of Revelation Technologies. All other trademarks and trade names are property of their respective holders.
